20 years ago it all began out of a small apartment in Avon, Colorado. What started as a group of 18 year-old kids trying to make something new with baseless bindings is now a brand with 20 years of roots, with riders sporting Technine gear in every corner of the snowy globe. Our vision and our goal 20 years ago was simple and stands true today: Create a brand where snowboarding is all that matters and put team riders' product needs first so we can make gear built for riders who spend every day of the winter on the snow. The progression of snowboarding combined with having fun with your friends is all we cared about but we wanted to do it our way. We had our own vision of snowboarding and have worked hard to stick to this vision and offer the sport a brand that is different than the rest. As trends changed over the years we have not recreated the image of the brand to follow the most recent fad but instead stuck to what we believe in. Welcome to Technine, and love us or hate us, it's 20 years later and we're still here!

I want to personally thank every rider who has ever strapped into a pair of our bindings, made a turn on one of our boards, or trusted in our apparel to protect them from the elements of winter. You have all made this possible. When we put out that first pair of baseless bindings we never knew what it would become and I don't think we cared. We just wanted to ride. Over the years we have always been surrounded by a sick group of snowboarders that helped push Technine to new levels. We are proud to bring a few of those names back to the line this year. If it was not for Ali Goulet's misty flips, MFM's attitude, Tarquin Robbins' style, or a rider as unique as Scotty Wittlake, we would probably not be here today. Props to all the riders who have come through our ranks and now hold prestigious jobs in the industry or even own their own brands. This crew is part of our heritage and made us what we are today. To all the shredders out there with Split T tattoos, thanks for making Technine part of your life, as it blows my mind every time I see this. For us, Technine is so much more than a brand; it's a lifestyle. Snowboarding is so much more than a sport. It's something that will change your life forever and bring you into a community filled with the most amazing people you will ever meet. Thanks for your support and here's to an amazing 20 years and many more to come.

MENS BINDINGS

As we enter our 20th year of making some of the world's highest quality snowboard bindings it's easy to look back and reflect on how much the sport as well as its products have changed over the years. But as technology advances some things always stay the same. Our commitment to quality first has been our motto since 1994. Bindings are the ultimate tool for snowboarding and the connection between the snowboarder and the snowboard. The most important characteristics for any good binding are comfort, quality and a direct feeling that you are one with your snowboard. After 20 years of development we bring you our strongest binding line to date. Innovations like the Baltimore toe strap and the Comfort King ankle straps helped put Technine on the map. Redeveloping innovations like the Scrub Hooks and streamlining the way your foot fits perfectly into a binding are just some of the ways we show time and time again that we are dedicated to the progression of snowboarding products. Of course all of this innovation and development is only half the battle. We go all out to make sure each binding has all the cosmetic features that speak true to the brand. All of our bindings are designed to match up to your favorite boards in the line to create the ultimate package. If this is not your thing then don't worry. We are proud to offer bindings like the Elements and the Throwback Pro binding that boasts quality first and are designed to look tight on any board snowboarding has to offer. This year we will push the limits of binding technology yet again with our new binding the TN-14. To pay tribute to our past each TN-14 binding is designed by a pro from our past that helped get the brand off the ground in 1994. The new ultra light TN-14 was designed with our roots in mind, capturing the concept of baseless bindings that allow the binding to flex with the board without creating a dead spot under the binding's base and losing stance options or the cushion of a traditional design. The new split binding design is a step forward in the progression of binding technology and is one more reason why after 20 years riders from all over the globe come to Technine for bindings. Find out for yourself why Technine has earned a reputation for quality and comfort. Get on a pair of Technine bindings today!

4

Technine has been on the forefront of binding innovation since baseless bindings in '94. Now 20 years later, we introduce the TN-14!

TN-14

ITEM No: F14BITND

With 20 years of experience building bindings we knew it was time to release something that would yet again change the way bindings are made. For many years we have wanted to take all the benefits of the baseless binding and put them in a binding that could work with current stance options and offer the dampening support of the Tech Bed. We have developed a binding that is split down the middle allowing for the ultimate connection of rider and board so they can get the most from these new designs. For the first time since baseless bindings, riders will feel the true flex of the board allowing snowboarders full integration with the boards as the binding will now flex with the board allowing you to feel the board's true flex as the designer intended. The split design also paves the way for a lighter binding by using less materials and the lightweight wire heelcup design reduces material waste in production because the wire is cut to precision length then bent while old heel cups are stamped then cut, creating massive waste. The feature we are most proud of is the new split highback which has interchangeable parts giving the rider all highback options from low backs to traditional highbacks or single and double scrub hooks all offered complete in one box. If you are planning to ride powder pull out your traditional highbacks but if you want a day in the park go with the low backs or double scrubs. In celebration of our 20th year making bindings we wanted to pay homage to the pro riders that made this brand possible so we invited MFM, Ali Goulet, and Tarquin Robbins to work with us on the cosmetic design, creating a binding that is not only unique and something new but also timeless and rooted in the history of Technine.

GENERAL NOTES:

SIZES: Medium (6-9), Large (9+)
RIDING TYPE: Park . All-Mountain

FEATURES:

HEELCUP: Pro 6061 T6 Aluminum
ANKLE STRAP: Comfort King II Dual Denisty EVA
TOE STRAP: Classic Tech Toe
FOOTBED: Tech Bed and 3 Deg Canted Tech Bed
RATCHET: Updated 3 Axis T9 alloy ratchet
HIGHBACK: TN-14 and Low Back

TUNED PERFORMANCE:

PARK DESTROYER PRO:
 - Baseless Construction
 - Flex and response tuned for park destruction with our most customizable feel. This is a classic Technine flex and response that is expected after 20 years and draws from the original baseless bindings we made from day one.

Nobody is harder on gear than Lucas Magoon. Built nuke-proof and packed with performance.

LM PRO

ITEM No: F14BILMP

Lucas Magoon is legendary not only for the massive urban features he throws down on, but also for the loose, laid back style he has while shredding in the park. His signature Technine LM Pro snowboard binding helps him when he's battling tricks in the streets thanks to a soft yet supportive flex and a cushy feel. A soft-flexing highback allows you to tweak your grabs while scrub hooks around the cuff provide leverage for sky-high presses and support on big drops. The short glass and nylon baseplate is complimented by a responsive aluminum heelcup for precision and control whether you're in the park or shredding pow. The Tech bed EVA foot bed cushions harsh impacts, and has a three-degree cant to match your leg's natural stance for reduced fatigue and greater ollie power. Comfort King III ankle straps are cored out to shave weight and made with EVA to balance comfort, support, and response. All of these features come together to make one of the best bindings in snowboarding.

GENERAL NOTES:

SIZES: Medium (6-9), Large (9+)
RIDING TYPE: Park, Freestyle

FEATURES:

HEELCUP: Pro 6061 T6 Aluminum
ANKLE STRAP: Comfort King III Dual Denisty EVA Ultra Lite
TOE STRAP: Classic Tech Toe
FOOTBED: 3 Deg Canted Tech Bed
RATCHET: Updated 3 Axis T9 alloy ratchet
HIGHBACK: Scrub Hook and TN-12

TUNED PERFORMANCE:

URBAN CRUSHER:
 - 14% short fiberglass / nylon baseplate
 - 14% short fiberglass / nylon scrub hook
 - Responsive 15/30 degree dual denisty EVA comfort king II ankle straps
 - Flex and response tuned for urban crushing with ultimate leverage from the scrub hook

MOUNTAIN SLAYER:
 - 14% short fiberglass / nylon baseplate
 - All nylon highback with softer geometry
 - Flex and response tuned to slay everthing the mountain throws at you with firmer support and instant response

Additional Highback Option:

1994  2014

Ride like the master of style Chris Bradshaw!

BRADSHAW PRO

ITEM No: F14BIBP

Watch any clip of the Mayor of Big Bear and it's easy to see why B-Shaw was dubbed the master of style. If you ask Chris how he rides the way he does he always comes back to scrub hooks and the way his Comfort King II straps allow him to tweak, not to mention the unmatched comfort. Bradshaw states that being comfortable on his setup with features like the canted Tech Bed and those dank cushy straps he is able to focus more on his style and what tricks he wants to do rather than worrying about his bindings. You can't buy style, but having the right gear does help!

GENERAL NOTES:

SIZES: Medium (6-9), Large (9+)
RIDING TYPE: Park, Freestyle

FEATURES:

HEELCUP: Pro 6061 T6 Aluminum
ANKLE STRAP: Comfort King II Dual Denisty EVA
TOE STRAP: Baltimore Toe Strap
FOOTBED: 3 Deg Canted Tech Bed
RATCHET: Updated 3 Axis T9 alloy ratchet
HIGHBACK: Scrub Hook and TN-12

TUNED PERFORMANCE:

URBAN CRUSHER:

- 14% short fiberglass / nylon baseplate
- 14% short fiberglass / nylon scrub hook
- Responsive 15/30 degree dual denisty EVA comfort king II anke straps
- Flex and response tuned for urban crushing with ultimate leverage from the scrub hook

MOUNTAIN SLAYER:

- 14% short fiberglass / nylon baseplate
- All nylon highback with softer geometry
- Flex and response tuned to slay everthing the mountain throws at you with firmer support and instant response

This is how Dylan gets it done.

THOMPSON PRO

ITEM No: F14BITP

If you have seen footage of Dylan you know he steps to some of the gnarliest features in snowboarding. This binding provides the right combination of flex and support Dylan needs to stack tech tricks on burly features that most other pros won't even touch. This year Dylan's binding comes with scrub hook highbacks and traditional highbacks both in the box so you can conquer every feature and type of riding the mountain has to offer. The short glass and nylon baseplate is complimented by a responsive aluminum heelcup for precision and control whether you're in the park or shredding through pow. The Tech Bed EVA footbed cushions harsh impacts and damps vibrations for a smooth ride. Comfort King II ankle straps are made with EVA to balance comfort, support, and response, and Baltimore toe straps fit over the front of your boot for a secure fit.

GENERAL NOTES:

SIZES: Medium (6-9), Large (9+)
RIDING TYPE: Park, Street, Jib

FEATURES:

HEELCUP: Pro 6061 T6 Aluminum
ANKLE STRAP: Comfort King II Dual Denisty EVA

Option:

Brew up some good times with this versatile binding!

BREWER PRO

ITEM No: F14BIBRP

Andrew Brewer's inspiration for this binding came from one of his favorite movies and the results are a binding that is as unique to the line up as Brewer is to the Technine team. This binding comes with a choice of highbacks. Choose the scrub highback if you're going to be spending most of your time in the park and the streets. It has a soft flex for tweaked tricks and a scrub hook around the outside of the calf to give you more leverage for tap-free presses and greater ollie power. If you're more into charging hairy lines and searching for powder, then go with the traditional highback for better response and support. This binding can handle anything the mountain throws at you and delivers the comfort you have come to know and trust from Technine.

GENERAL NOTES:

SIZES: Medium (6-9), Large (9+)
RIDING TYPE: Park, All-Mountain

FEATURES:

HEELCUP: Pro 6061 T6 Aluminum
ANKLE STRAP: Comfort King II Dual Denisty EVA
TOE STRAP: Baltimore Toe Strap
FOOTBED: Molded Tech Bed

The legendary one black one white Wittlake binding is back!

THROWBACK PRO WITTLAKE EDITION

ITEM No: F14BIWTP

To celebrate our 20th year of making snowboard bindings we called one of our favorite old Technine pros to bring back a binding that riders still talk about today. The first binding to ever be released where the left and right bindings are each a different color, this new look set a trend that binding companies now use in their line every season. Wittlake still snowboards more than the average rider and still insists on a simple binding design with minimal frills. Comfort, performance, and quality stand above all else. From the mind of Scotty Wittlake comes the Throwback Pro, a binding that is lightweight, responsive, and gimmick-free.

GENERAL NOTES:

SIZES: Medium (6-9), Large (9+)
RIDING TYPE: Park . All-Mountain

FEATURES:

HEELCUP: Pro 6061 T6 Aluminum

Clean lines and a smooth design! Mount the Elements on any board snowboarding has to offer

ELEMENTS

ITEM No: F14BIELE

The Technine Elements Pro snowboard binding features a park-tuned flex designed to handle biz on jumps, wallrides, rails, and everywhere in-between. Cushy Comfort King II straps and full-length baseplate padding keep your feet feeling fresh even after hours of non-stop hot laps. The short glass and nylon baseplate is complimented by a responsive aluminum heelcup for precision and control whether you're in the park or shredding through pow. The Tech Bed EVA footbed cushions harsh impacts and dampens vibrations for a smoother ride. Comfort King II ankle straps are made with EVA to balance comfort, support, and response, and Baltimore toe straps fit over the front of your boot for a secure fit. Highback options available with this model include traditional backs as well as a single Scrub hook.

GENERAL NOTES:

SIZES: Medium (6-9), Large (9+)

Spend less of those hard-earned green backs on product and have more cash for lift tickets.

THE CLASSIC

ITEM No: F14BICLS

The Classic gives you legendary Technine performance at a price that won't break the bank. This binding's lightweight nylon highback gives beginner and intermediate freestylers a forgiving flex to help them progress in the park and around the mountain. A freestyle-flexing baseplate allows for good board feel and makes turn initiation fluid so you can link curves with ease. TPU ankle straps are flexible for comfort and low-profile toe straps can be worn around the front of the boot or over the top. The molded EVA footbed cushions your feet from harsh impacts and absorbs vibrations for a smooth ride.

GENERAL NOTES:

SIZES: Medium (6-8), Large (8-12)
RIDING TYPE: All-Mountain

FEATURES:

HEELCUP / BASEPLATE: Single Component 15% Short Glass / Nylon Composite
ANKLE STRAP: Classic Low Profile
TOE STRAP: Classic Low Profile
FOOTBED: Molded One Piece EVA
RATCHET: Updated 3 Axis T9 alloy ratchet
HIGHBACK: All Nylon Classic Low Profile

WOMENS BINDINGS

Built for charging everything the mountain has to offer, Technine's commitment to women's snowboarding is evident in the designs we bring to the table. We start with the women's Element binding using the technology of our proven Pro Frame, re-engineered to perfectly fit the woman's foot. This also goes for the Comfort King II straps, Baltimore toe straps, ultra comfort Tech bed solid EVA footbeds, and the Pressure Directed highbacks. These all come together to offer the best fit and performance in women's snowboarding. The Women's T9 binding is a lightweight model designed specifically for the way a woman rides, ensuring complete control, total power, and ultimate fun. The low profile straps eliminate unnecessary materials to improve response and prevent painful pressure points while cushioned footbeds and ultra light highback make this an easy-riding design that's perfect for taking your skills to the next level.

Technine's women's line is designed to fit women's feet and bodies perfectly so you can think less about hurting feet and think more about shredding the mountain. Let your brain control your board effortlessly and your bindings be the ultimate tool to bring body and board together as one.

Feel in your element!

WOMENS ELEMENTS

ITEM No: F14BIWEL

While other companies seem to only offer women what are basically softer versions of their men's bindings, we understand that female riders have different anatomies and different needs. That's why the Technine Women's Elements binding has a women's-specific design that provides optimum performance and all-day comfort for chicks that rip.

The Pressure Directed highback is asymmetrical for better response, and it's slightly lower than men's bindings to relieve pressure on the calf since women's calf muscles are lower on the leg. The short glass and nylon baseplate is complemented by a responsive aluminum heelcup for precision and control whether you're in the park or shredding through pow. The Tech bed EVA footbed cushions harsh impacts and damps vibrations for a smooth ride. Comfort King II ankle straps are made with EVA to balance comfort, support, and response, and Baltimore toe straps fit over the front of your boot for a secure fit.

GENERAL NOTES:

SIZES: Medium (6-8), Large (8+)
RIDING TYPE: Freestyle, All-Mountain

FEATURES:

Step it up this season.

WOMENS T9

ITEM No: F14BIWT9

The Technine T9 binding gives progressing female riders an easy-riding design that's perfect for taking your skills to the next level. A soft flex and women's specific design makes it comfy and easy to control whether you're working on linking carves or stepping up your jib game in the park. Designed specifically for female riders, the highback is asymmetric to match the shape of a woman's leg for greater comfort and control. It also has a soft flex that, along with the freestyle-flexing baseplate, makes turn initiation fluid and easy. TPU ankle straps provide a pressure-point-free fit for all-day comfort, and low-profile toe straps can be worn around the front of the boot or over the toe.

GENERAL NOTES:

SIZES: Small (6-8), Medium (8-12)
RIDING TYPE: All-Mountain

FEATURES:

HEELCUP: Single Component 15% Short Glass / Nylon Composite
ANKLE STRAP: Classic Low Profile
TOE STRAP: Classic Low Profile
FOOTBED: Molded One Piece EVA
RATCHET: Updated 3 Axis T9 alloy ratchet
HIGHBACK: All Nylon Classic Low Profile

Here are the specifics:

SCRUB HOOK: Lucas Magoon and Chris Bradshaw have been rocking second hand binding wings for years. Ebay ran out so we made 'em just for them, and riders everywhere get to share in the benefits. The new Scrub Hook highback takes an idea as old as highback bindings themselves, reconfigured for the new generation of riders and their needs. The Scrub Hook is made for increased leverage and street cred. Could this be the secret to Magoon's super powers? No. But we guarantee it doesn't hurt.

COMFORT KING II ANKLE STRAP: Nothing robs performance like pain does. The second you think about foot pain is the second you start to suck. But wait... the legendary Comfort King ankle strap returns in the form of the Comfort King II. A specially configured multi-density EVA array fits like a velvet glove, only smoother. Add this to the all-new Baltimore Toe strap or the Classic straight down strap and your feet will be working for you, not against you.

TUNED RESPONSE: Technine Pro Series bindings now offer varied flex combinations and padding configurations to match the diversity of riders and riding styles everywhere. We mix the perfect ratio of nylon to fiberglass in the baseplate, adjust the strap padding density, and tune the highback stiffness depending on if you're lapping the park or running top to bottom burners hitting everything in between. Whatever your riding style, you'll find a match in the Pro Series.

PRO-FRAME: The Technine Pro Frame is the foundation on which our Pro series is built. This 6061 T6 aircraft grade frame brings the front mounting points forward of the mounting disk for immediate response both on toeside and heelside turns. It also allows the baseplate to be soft laterally without losing leverage and support from front to back. Plus, your forward lean block allows just enough give so your riding stays smooth!

TECHBED: Techbed solid EVA footbeds provide complete support for your boot from front to back and side to side. This eliminates the hollow spot on most bindings where the disk sits that greatly contributes to foot fatigue and loss of response.

TECHBED 3: The Technine Techbed 3 is a 3 degree full EVA footbed that creates a more natural angle with your legs in relationship to the board, giving you more leverage over your tip and tail. This means a noticeable increase in pop and control, even on reverse or flat camber boards.

DOUBLE SCRUB HOOK: Half of the riders out there ride their Scrub-hooks towards the outside, and the other half to the inside. What if you want both? Technine's Double Scrub Hook is the answer for riders who want total control in every situation, because one Scrub is just not enough.

1. HIGHBACKS

Technine highbacks are made from the toughest custom-blended nylon polymers, for just the right amount of flex and comfort. They also feature lightning quick response without the worry of breakage. The cup-shaped highback bottom and comfort-molded eva pads dampen vibration and provide grip to eliminate heel lift. Most importantly, our Pro Series Binding offers independent highback rotation, while not interfering with ankle strap adjustments.

2. FORWARD LEAN ADJUSTMENT

We build in a small degree of forward lean for great heel edge response but still feature a forward lean adjustment that is fully customizable.

3. BALTIMORE TOE STRAPS

The Baltimore toe strap is designed to pull the boot down and into the heelcup giving maximum response. They are also designed to distribute the pressure evenly across the boot to eliminate unwanted pressure points.

4. HEEL-CUPS

All Technine heel-cups are made from the highest grade 6061-T6 aircraft-quality aluminum. They allow the boot and binding to act as one. They also feature heel cup adjustment that allows edge-to-edge centering, giving the rider total adjustability to eliminate toe and heel drag. This feature means more freedom to customize, as your base plate disks are used to dial in personal stance width angles.

5. BASE PLATE DESIGN & MATERIALS

Baseplates are made of custom-formulated nylon polymers with short grain fiberglass to make T9 bindings ultra-strong yet flexible enough for both entry level and pro riders. Our extensive laboratory and on-mountain testing ensures that the final products meet the strict performance standards of the Technine Snowboard Team.

6. RATCHET BUCKLES

Technine's ratchet buckles are composed of specially formulated cast aluminum, steel, and nylon polymers. This allows riders to ratchet their straps down tightly while minimizing stress on the ladders. In

addition, all of our binding models feature customized rubber logo grips, which give more adjusting power in cold and/or wet conditions.

7. ADJUSTABLE TOE RAMPS

All models feature toe and heel ramps designed to aid in weight and energy transfer, and ultimately, improve edge control. Our toe ramps work with boot tread contours and our custom-molded toe and heel ramp pads give comfort, dampen board vibration and impact, and allow excellent edge response while alleviating foot pain.

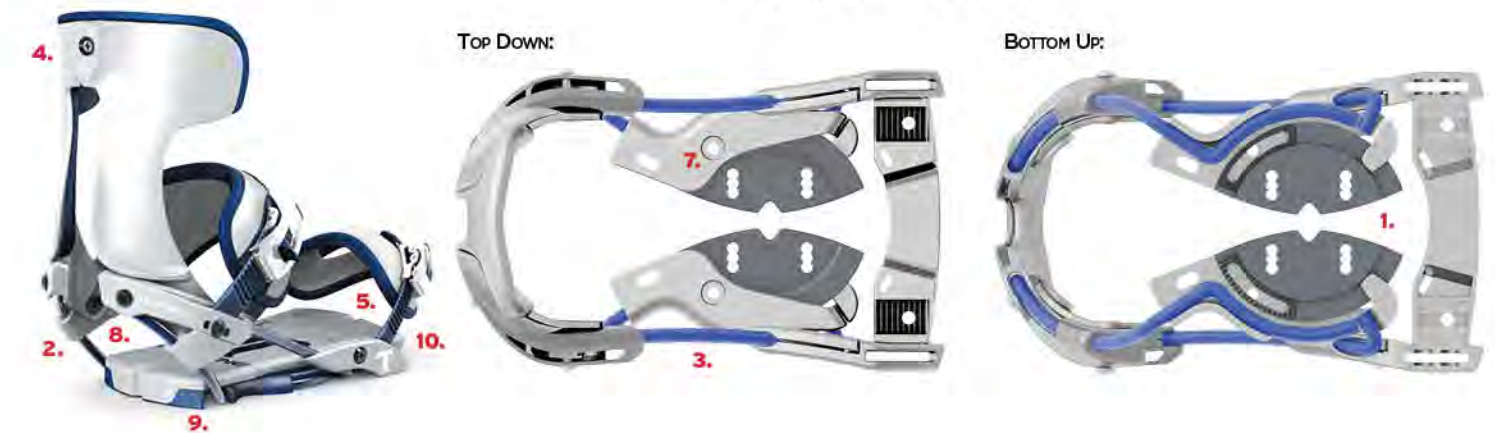

With 20 years of experience building bindings we knew it was time to release something that would yet again change the way bindings are made. For many years we have wanted to take all the benefits of the baseless binding and put them in a binding that could work with current stance options and offer the dampening support of the Tech Bed. Traditional bindings create a dead spot under the baseplate that stops you from maximizing the flex of your board. Board designers have spent years developing new cambers and dialing in flex patterns and are now offering the best boards ever produced in the history of the sport. We have developed a binding that is split down the middle allowing for the ultimate connection of rider and board so they can get the most from these new designs. For the first time since baseless bindings, riders will feel the true flex of the board allowing snowboarders full integration with the boards as the binding will now flex with the board allowing you to feel the board's true flex as the designer intended. The split design also paves the way for a lighter binding by using less materials and the lightweight wire heelcup design reduces material waste in production because the wire is cut to precision length then bent while old heel cups are stamped then cut, creating massive waste. The feature we are most proud of is the new split highback which has interchangeable parts giving the rider all highback options from low backs to traditional highbacks or single and double scrub hooks all offered complete in one box. If you are planning to ride powder pull out your traditional highbacks but if you want a day in the park go with the low backs or double scrubs. In celebration of our 20th year making bindings we wanted to pay homage to the pro riders that made this brand possible so we invited MFM, Ali Goulet, and Tarquin Robbins to work with us on the cosmetic design, creating a binding that is not only unique and something new but also timeless and rooted in the history of Technine.

FEATURES:

1. Split Baseless Binding
2. Split Heelcap, can be connected to increase stiffness
3. Ultra Light 8mm Wire Heelcup Structure
4. Split Highback Construction, allowing 4 different options per foot included in one binding
5. Techbed / Techbed 3deg Included
6. All New Split Mounting Disc Design

7. 2 screws are used to lock the binding structure to the aluminum split disc. These 2 screws are also to adjust the angle . 4 screws are then used to lock the split disc on the boards and to adjust the stance.
8. Forward lean adjustment integrated into the highback arms to decrease weight and material
9. Underlying rubber gasket decreases damaging interference between binding and board contact points
10. Adjustable Toe Ramp

SPLIT HIGHBACK OPTIONS:

MENS BOARDS

For 2014/'15 we are proud to release the most progressive Technine board line to date. We have gone through the line fine-tuning materials and flex ratings while updating shapes and making sure our boards are perfectly tailored to the Technine customer. With a huge emphasis on freestyle snowboarding the Technine board line offers something to cover all aspects of this category. From extra soft reverse camber rocker boards designed to cause havoc in any park to snappy flexed hybrid camber all-mountain machines built to handle the aggressiveness of the Technine team, the line is built for progression and designed for having fun. Jump on the LM Pro, Bradshaw Pro, or the Joint and be prepared to hit up any urban street spot. Mount up an Elements, Shred 'Til Death or a T-Money and do endless laps on any quad around the world. Remember one thing: Technine boards are made with simple intentions. Having fun with your friends and becoming a better snowboarder while doing it, with enough cash leftover for pitchers, nachos, and stories at the end of the day!

LM PRO

ITEM No: F14BOLMC

Gooner relies on this stick to clear gaps and take weird lines that most shredders would never step to, so you know it'll work just fine for taking apart your local mountain's park or that rail you've been eyeing up in the city. Classic camber provides pop for going big off jumps and holding an edge while railing down groomers. An ultralight poplar core with added birch stringers combined with biax glass gives you a super-soft flex so you can get your tricks pressed harder than ever. The unique carbon stringer layup consists of Vs in the nose and tail combined with stringers running from tip to tail to create one of a kind pop that will not only boost your ollies but keep the board resilient from day 1 to 200. Custom rubber edge dampeners combined with the three-layer interior rubber dampening mellows out chatter for a smooth ride on groomers as well as reduces impact when smashing down on rails or boxes in the park. The sintered base is fast to keep you moving through the flats and durable to resist damage from street sessions.

BRADSHAW PRO

ITEM No: F14BOBRA

If you have ever been to Bear Mountain you would know how high Chris Bradshaw gets. We're not sure what you are thinking but we're referring to his amazing ability to pop an ollie higher than any other snowboarder on the mountain and do it with style. While the Bradshaw Pro might not give you his amazing one-of-a-kind style it might help. Bradshaw only believes in traditional camber but don't worry, your presses will always look proper thanks to the biax fiberglass and a smooth soft flex. Carbon additives will improve energy transfer though out the board, allowing you to pop fat ollies and hold an edge on laid out turns. This year we have added a sintered base to this model so you can confidently shred everything in sight and worry less about core shots.

GENERAL NOTES:

SIZES: 149.5 / 152 / 156

ELEMENTS

ITEM No: F14BOELEM

The hybrid profile with rocker between the bindings and camber underfoot in the tip and tail allows for quiver-killing all-mountain freestyle riding. Your park board is now your all-mountain freestyle weapon. Enjoy the benefits of an all-terrain, hybrid design and ride the entire mountain with confidence and poise. Tip-to-tail poplar wood combined with birch stringers make a lightweight core that delivers cat-like responsiveness and loads of pop. For an even lighter riding experience, the core's center strip has been milled out and filled with a honeycomb air insert. Carbon Vs in the tip and tail deliver unmatched pop. If riding everything the mountain has to offer is your thing then this is the board for you!

CORE FEATURES: Carbon Stringer V's at Tip and Tail

SHRED 'TIL DEATH

ITEM No: F14BOSTD

A simple motto to live by: Shred 'Til Death! Traditional camber gives it the pop and power to have fun anywhere on the mountain while a soft flex and twin shape keeps it loose enough for park domination. Biax glass gives it a nice even flex that will allow you to lay down seriously tweaked presses. A tip-to-tail poplar core keeps it lightweight and gives it a snappy feel, and three-layer rubber dampening mellows out chatter for a smooth ride. The extruded base is easy to repair, which will come in handy after a few sessions out in the streets.

THOMPSON PRO

ITEM No: F14BOTMP

Dylan Thompson is a huge fan of both hockey and snowboarding and over the years he has learned that they have a lot in common. They both require cold temps and frozen water, and both have been known to give you a beat down from time to time; they also both require sticks to participate. Unlike a hockey stick, however, the Technine Thompson Pro is a shred stick that helps Dylan Thompson lay down mind-blowing tricks and slay jaw-droppingly huge features from the park to the streets.

THE JOINT

ITEM No: F14BOJOI

Who doesn't want to ride down the mountain on a giant Joint? The custom jib edge light-weight design and flat rock camber makes this the perfect tool for any snowboard park. Custom jib edges will keep you from catching on boxes in the park or your favorite street rail. If you are looking for a board that delivers next level fun in any park or for just cruising around that mountain, then light up this joint. Puff, Puff pass!

CAMROCK GUN

ITEM No: F14BOCAM

Destroy any groomer on the mountain with a board built for control at high speeds for the advanced and an easy to ride non-catchy edge for those getting started. The CamRock's rockered nose and tail will also keep you afloat in the pow. This special 20th anniversary throwback art design pays tribute to the early 90s when Tarquin Robbins dominated the mountains of Colorado with a light blue board showing the image of a sawed-off shotgun. This is the Technine version of a snowboard classic!

GENERAL NOTES:

CHAMPIONS

ITEM No: F14BOCHA

Designed for the true all-mountain freestyle champion ripper. You will find this board is slightly floatier with a more forgiving feel than its full camber counterparts. The hybrid profile features rocker between the bindings with camber underfoot for a poppy ride that holds a mean edge without compromising its ability to float effortlessly in powder. Biax glass keeps it loose for a forgiving feel and a pressable flex. The tip-to-tail poplar core laced with a carbon strip running down the center of the board makes for unmatched strength-to-weight ratio not to mention pop for days. A snowboard fit for a champion!

GENERAL NOTES:

LM PRO FLAT

ITEM No: F14BOLMF

Built to withstand anything Magoon can come up with in a day on the mountain or in the park. The fact is you never know what kind of trick Lucas Magoon is going to throw when he drops in, but you can guarantee it's going to be steazy as hell. Lucas has the confidence to hit up any kind of obstacle thanks in part to his Technine LM Pro Flat snowboard. The Rock Steady flat camber profile is stable enough to handle all his crazy lines, and carbon stringers provide the pop he needs to ollie picnic tables and whatever else is in his way—but it's still soft enough to press and blunt to his heart's content. Rubber edge dampeners offer impact resistance that gives him the confidence to bonk everything in site. Mount up the LM Pro Flat and change your whole perspective on snowboarding.

GENERAL NOTES:

SIZES: 147 / 149.5 / 152.5 / 155

BREWER PRO

ITEM No: F14BOSBRP

Andrew Brewer is no stranger to stacking footy and his signature Technine Brewer Pro Snowboard gives him the pop, durability, and buttery flex he needs to make film-worthy action happen in the streets. The Rock Steady flat camber profile and Custom Jib edge offer a pressable, catch-free ride that ensures more stomps and fewer face plants. The sintered base is fast to keep you moving through the flats and durable to resist damage from street sessions.

GAS MASK

ITEM No: F14BOGAS

Get on the board that started it all. In celebration of Technine's 20th year we've recreated the first board that we ever produced. Longtime friend and artist Dave Doman came to us with this board art almost 15 years ago and it is as fresh now as it was then. We've updated the shape and camber profile to give you a board that represents the history of our brand but reflects modern technology and design. The Rock Steady flat camber will rip on any terrain from the park to the backcountry and everything in-between.

WOMENS BOARDS

When making women's snowboards the formula for us is easy: Make nice soft fun boards that girls of all ages can jump on and instantly have a great time riding. From shredding boxes in the park to linking turns in and out of bounds we have the right board for every type of female rider. While designing the 2014 line, our philosophy is to keep it simple. Simple ingredients made out of the highest quality materials is the key to making the best products snowboarding has to offer! Then add fun shapes and camber types plus a poppy yet forgiving flex and put it all together in a lightweight package and you got one hell of a board. Ride one today and find out why year after year more and more women riders from all over the world are riding Technine.

NINE LIVES

ITEM No: F14BWNIN

A snowboard that has Nine Lives! While some of your friends may be fine with slip-sliding their way down the mountain on rocker boards, you crave the pop and power you can only get from camber. The Nines features classic camber to give you superior edge hold and help you boost off jumps. A soft yet poppy flex, traditional camber design, and lightweight Power Tech wood core helps it shine in the park without taking away from its ability to tear apart the rest of the mountain.

CHALK BOARD

ITEM No: F14BWCLK

Taking shredders to School for 20 years! When it's time to step up your park game or push the envelope on your jib skills, look to the Technine Chalk Board. Featuring Rock Steady flat camber, this park-orientated board takes the best of both camber and rocker for a supremely stable ride that presses easily yet doesn't catch an edge like a traditional cambered board. Combined with a twin shape, centered stance, and soft flex, this flat camber board is not only ideally suited for park-ripping ladies, but it also caters to women looking to carve first turns or increase their riding abilities. In honor of our 20th year anniversary we are re-releasing the first art we ever put on a women's snowboard. Get on the Technine throwback that started it all!

VINES

ITEM No: F14BWW

Flower Power! This rockered, true twin, freestyle shredder is just as adept at getting beginners off the bunny slope and onto harder runs as it is helping seasoned veterans nail that elusive rail combo that they've been fighting with since last year. The soft flex is buttery which quickens the learning curve and makes it super-forgiving. The twin shape opens up infinite switch tricks, making it a perfect match for jib fanatics and beginners alike. The extruded base slides fast, it's easy to repair, and it'll perform great even when you forget to wax it for a day or two.

General Construction

Teaming up with two of the most respected snowboard factories in the world ensures that as the sport progresses, our technology and engineering capabilities do as well. Our development team works countless hours to make sure every board pressed lives up to our reputation for quality, shelf appeal and most of all, the ability to give you some of the best days riding in your life. We build our boards with a huge emphasis on the final price tag without sacrificing any craftsmanship or quality. Continued performance day after day and ollie after ollie as well as turn after turn. Technine snowboards offer countless days of exceptional rideability and good times. For the '13/'14 collection we have re-tuned our technical design while adding innovative shapes, all new cores and camber profiles, and of course, paying special attention to quality as well as setting a new standard for freestyle, park and urban snowboard design.

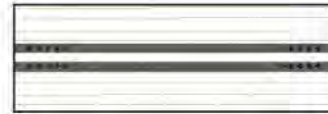

Board Tech

Tip-to-tail, edge-to-edge Wood Core Construction: The essence of each board is its core. It all starts with high quality

Power Tech Core

Full tip-to-tail poplar wood core with Finger Joints. Poplar provides strength and the perfect amount of feel and control. Poplar is also known for its perfect balance of stability and energy.

Dual Tech Core

Full tip-to-tail poplar wood core and Finger Joints with added birch stringers. These two strips of birch running tip-to-tail through the inserts gives the board added pop plus extra-reinforced insert strength. Birch and poplar together are the perfect combo for lightweight, responsive, easy-to-ride flex.

Ultra Lite Power Tech Core

Hands down the lightest and advanced core we have. Three species of wood are placed together (Birch, Paulownia, and Poplar). Creating a super lightweight core giving you cat like responsiveness and loads of pop. Pair with bamboo stringers and you will be unstoppable!

Honeycomb Air Core Insert

More bounce to the ounce! Milling out a strip of the core in the center of the board and added a honeycomb air core insert makes this board incredibly lightweight. Careful when jumping, or you might just overshoot the landing

Fiberglass / Layup

Bi-Axial Laminate

Biax is perfect for freestyle riding. Lightweight and efficient. The fiberglass lay up is built for the type of riding you love and offers a smooth, even, dependable flex without adding unnecessary weight.

Rubber Edge Dampener's

By placing a specially-designed rubber dampener between the sidewall and edge located from front to back inserts not only dampens vibrations and reduces fatigue but also creates the perfect jib weapon. Reduced vibrations while sliding rails as well as impact resistance means this board is built for the type of riding that Lucas does best.

Internal Rubber Dampening

By placing a rubber layering system underneath the upper fiberglass and in-between the lower fiberglass and base, the boards have less chatter and perform better at high speeds. This process promotes a smooth ride, giving the rider more board control and increased impact resistance.

Ultra Thin Jib Core Profile

To get the softest jib machine in the world we had to redesign the core! Bradshaw and Gooner like soft, poppy boards built for terrorizing the parks of any resort. Soft flex patterns equal a fun easy to ride board. We have designed a special ultra thin jib core that has a unique core profile that allows the board to be thinned out in just the right areas to give you a one-of-a-kind smooth soft flex pattern yet retain all the strength needed to make a board that's built to last.

Custom Jib Edge Factory Detune

Detuned to perfection right out of the wrapper. This custom park feature gives the rider nothing to worry about when hopping on a box or rail. The edges still allow for the perfect turn but are detuned in all the right places to give the rider a worry-free attitude when throwing down new moves on any jib.

Core Additives

If you want to ollie higher than before and get more power from your pop, additives are the name of the game!

1. Full Carbon Taping

Tip-to-tail Carbon and Kevlar taping offers a smooth, even flex and long term stability from the tip to the tail of the board. Enhanced ollies and stomping control for multiple seasons of riding.

2. Double Carbon Cross:

Double the carbon equals double the pop. More bounce to the ounce on a carbon lay up built for the rider who demands performance.

3. Carbon V with Tip to Tail:

This is the ultimate carbon lay up! Not only can you harness a better Ollie with the V carbon formation but the tip to tail springs add a more even flex to your entire board allowing for more control and a smoother ride. Avoid chatter and maximize Pop!

4. Carbon Taping

Complete control in a variety of conditions and terrain! From tip to tail, the single carbon taping promotes even flex and decreases flex fatigue.

Bases

Extruded Base:

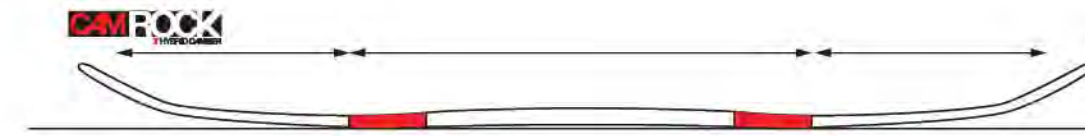

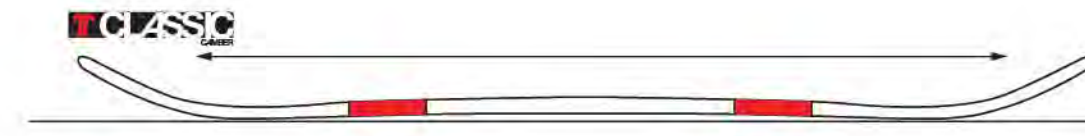

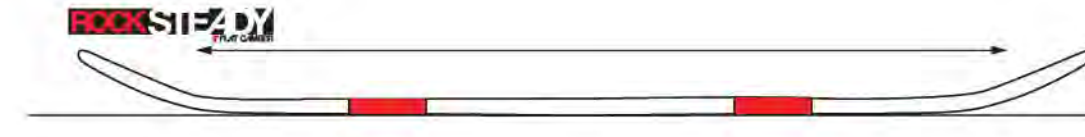

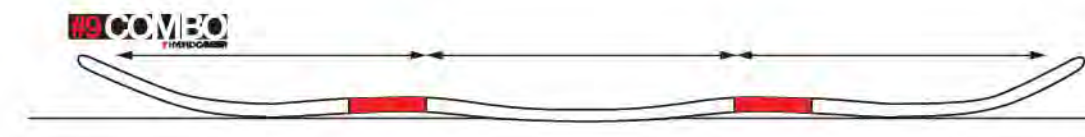

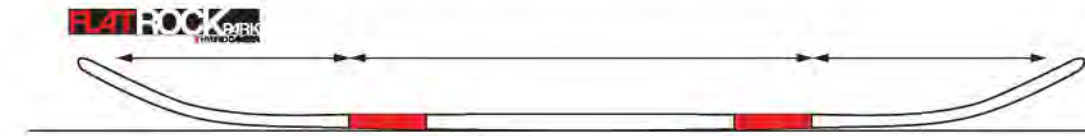

Extruded bases are really good for freestyle boards, park boards, and especially for street boards because they can be repaired easily. As Technine is a freestyle company we feel this is the perfect base for our riders.

Sintered Base:

The P-Tex base material is ground into powder, heated, pressed, and sliced into shape. Sintered bases are built with the hardcore in mind. Extremely durable and designed to hold wax longer. These bases are extra fast and built tough.

Extras

Technine always goes the extra mile when making a snowboard. Shelf appeal is the name of the game. Let's face it...with all the cash you're dropping on a shred sled, the board better ride amazing and look good when its sitting against the wall at your crib. From specially designed metal inlays to pushing the limits of art and design capabilities, Technine is all about making snowboards look good. For 2013/'14 you will see a great mix of matte gloss ink effects, like Metallic inks and foil stance indicators as well as our custom rough touch ink. We have collaborated with an amazing group of artists who all bring a different unique style to what we do and how we do it. From the more logo-driven heavy Technine style to a more art driven feel, the line has perfect balance.

Flat Rock Park:

The ultimate hybrid camber for park and freestyle riding. From insert to insert you have all the benefits of Flat Camber. The flat design between your feet offers pop, precision and control. The nose and tail taper up into our single radius reverse camber offering supreme rideability, deep presses, and a super catch-free edge.

Flat Rock:

With a primarily flat design, you have a spring-loaded ride that will not only blow your mind but also offer all-terrain high performance. The nose and tail begin to blend into reverse camber just along the outside edge of your binding for the most forgiving fun float and all-around easiness.

#9 Combo Hybrid Camber:

This is a hybrid camber. Traditional camber under the bindings leading out to the nose and tail while between the bindings has a rocker camber. The traditional camber in the front and back allow you to pre-load the board for extra pop into ollies, while the rocker between the bindings moves the control to the center of the board. Spinning and buttering just like you could on a rocker, but with the pop of a traditional camber board.

Rock Steady Flat Camber:

If you want the best of both worlds then this is the camber option for you. Our whole team has embraced flat camber because of the benefits of heavy pressability combined with all the pop of a traditional cambered board. Some say reverse camber should be left to powder riding and kids just learning how to press. Flat camber is for riders ready to take their freestyle and jibbing skills to the next level. Testing has also shown that flat camber is much more stable and really helps riders lock in landings and power through turns.

9 Rocks Reverse Camber:

A rocker built to have fun in the park! From pressing boxes to sliding cold metal street rails, we have built the ultimate reverse camber for jibbing. For our rocker boards we have a single radius angle reverse camber. Only 10cm of the middle point of the board is touching the ground, and the rest of the camber is above it. The ultimate result is a poppy board with a very stable nose and tail built for presses and having fun in the park.

Classic Camber:

Traditional camber has been around since snowboarding began because it works. It keeps the contact points of the board on the snow, providing stability at high speeds and stores potential energy allowing the board to pop into ollies and pump out of hard turns.

Camrock Camber:

The power of a traditional camber without catching an edge while buttering, welcome to Camrock! Between the bindings is traditional camber while the tip and tail contain rocker cambers. Essentially, this is the opposite of combined camber. The raised tip and tail help float the board in powder and reduce the chances of edge catch, but with the benefit of the traditional camber pop beneficial with ollies and while powering out of turns.

OUTERWEAR

“Since 94” has been embossed on our labels for 20 years now. We have a lot of pride in what our brand stands for and has accomplished over the years. Our team, style, passion, hard work and most importantly, our history have once again delivered one of the most unique Technine collections to date.

We’ve remixed some of our throwback classics and reintroduced the prints and fabrics that put us on the map and gave Technine the look and feel that can be seen all over the world today. Thank you to all the Technine fans who have played a part in our heritage and help us continue the legacy.

-Cole Taylor
